AI and Azure cost

Use these four questions with the person who owns the decision. Record evidence for each answer before changing a production setting.

01 **Does every person who can use Cowork or an agent sit under a spending policy with a per-person limit and an alert?**

ANSWER AND EVIDENCE

02 **Is there a cap per agent on the environment where your teams build agents, with the owner on the alert?**

ANSWER AND EVIDENCE

03 **Do your Azure subscriptions carry budgets that alert, and token limits at the gateway for model deployments?**

ANSWER AND EVIDENCE

04 **Does someone read cost by use case against value each month and own the forecast?**

ANSWER AND EVIDENCE

What to do next

01 Assign an owner to every unanswered question.
02 Collect the current policy, access and operating evidence.
03 Agree on a small test with a named human approval point.

No customer data is needed for any answer. When the answers point at work, a scoped review is quoted after a scoping call at simplicityitinc.com/scoping-session/. Every example Simplicity IT publishes is fictional and no client is named.
